SUMMARY

Senior Software Engineer with 9+ years building TypeScript-heavy web platforms and distributed services. Most recently shipped live collaborative editing across Webflow's visual site builder, a platform serving 3.5M+ users, then redesigned its realtime sync architecture end to end. Deep experience with React, Next.js, Node.js, GraphQL, PostgreSQL, and AWS, plus production AI engineering with agents and MCP tooling.

SKILLS

- **Languages:** TypeScript, JavaScript, Java, SQL
- **Frontend:** React, Next.js, Redux, React Query, Vite
- **Backend & Data:** Node.js, NestJS, GraphQL Federation, REST APIs, PostgreSQL, PostGIS, Redis
- **Cloud & DevOps:** AWS (Lambda/S3/SQS/EventBridge), Docker, Kubernetes, Nx, GitHub Actions, GitLab CI/CD
- **Testing & Observability:** Jest, Playwright, React Testing Library, Datadog, Statsig, Amplitude
- **AI Engineering:** Agentic architecture, multi-agent orchestration, MCP server & tool design, prompt engineering, context management
- **AI Tooling:** Claude Agent SDK, Claude Code, OpenAI Codex, Cursor, agent skills, CI/CD agent pipelines

WORK EXPERIENCE

Webflow Inc.

Remote | Mar 2025 – Present

Senior Software Engineer

- Shipped realtime multiplayer editing across Webflow's visual site builder (pages, content management, ecommerce, site versioning), a platform serving 3.5M+ users.
- Redesigned the realtime sync architecture into TypeScript primitives that let any product team add realtime features without touching shared infrastructure, then built the full implementation.
- Resolved a months-long failure that degraded published images on enterprise sites: root-caused a race between collaborative editing and publish, and built recovery tooling support teams used live with customers.
- Hardened realtime collaboration through its rollout to every Webflow site, where the opt-out rate held near 0.4%: connection-health monitoring, outdated-client protection, and customer collaboration controls.
- Built agent skills and Cursor rules that teach AI coding tools the new realtime architecture.
- Currently own the editing experience and rendering performance for Webflow Campaigns, an AI-native beta product where marketers refine AI-generated landing pages.

Spotify

Remote | Jul 2024 – Dec 2024

Senior Software Engineer, Frontend (Contract)

- Launched Spotify for Authors, a public platform where authors and publishers bring audiobooks to Spotify's 760M+ monthly active users.
- Built author-facing product surfaces with TypeScript, React, and Next.js for catalog management, audience insights, and publishing workflows.
- Improved crawlability, initial load behavior, and data-fetching reliability with SSR-first Next.js patterns and React Query.

Chief Inc.

Remote | Nov 2022 – Mar 2025

Senior Software Engineer, Fullstack

- Modeled the PostgreSQL and PostGIS data structures that powered location-aware discovery, matching, and search for a private executive network.
- Improved GraphQL API performance by tuning SQL queries, resolver patterns, and service boundaries.
- Created shared NestJS modules, Dockerized services, CI/CD pipelines, and observability tooling used across distributed product teams.

FIS Global

Remote | Jul 2021 – Nov 2022

Lead Frontend Engineer (Contract) | Apr 2022 – Nov 2022

Senior Frontend Engineer (Contract) | Jul 2021 – Apr 2022

- Developed a global payments dashboard in React and TypeScript for teams monitoring \$1.5B+ in annual transaction volume.
- Built secure frontend auth flows with OAuth 2.0 and JWT handling for financial transaction workflows.

- Set the frontend patterns across dashboard modules, reusable UI components, API integrations, and test coverage after promotion to lead.

The Home Depot

Atlanta, GA | Feb 2017 – Mar 2021

Fullstack Software Engineer | Jul 2018 – Mar 2021

Apprentice Software Engineer | Feb 2017 – Jul 2018

- Built One Returns, a full-stack React application deployed across 2,000+ stores to streamline returns workflows for store associates.
- Maintained and modernized the store operations software behind 1.6B+ annual transactions.
- Improved reliability of legacy store tooling by refactoring workflows, stabilizing integrations, and supporting production releases.
